FAT BOB FENDER

FOR SOFTAIL MODELS 1984 TO PRESENT AND CUSTOM APPLICATIONS

Exhaust

This steel rear fender was designed not to split, it's made from one piece in 0.060" (16 gauge) steel which has been phosphate etched to help prevent corrosion and to give a good base for primers to adhere. The fender is 9" wide, has a more rounded profile across the top to match with today's lower profile tires, a rolled edge along the sides to give more stylish look and an ignition module mounting position already set in. Will accommodate big wheel conversions with tires up to 200 wide.

ROUND TOP REAR FENDERS FOR WIDE TIRE SOFTAIL-STYLE FRAMES

- * These top quality fenders have been manufactured from thick 14 gauge steel using a deep-draw process that delivers a single, strong one-piece fender. . .you won't find any welded-together fenders here.
- * Each of the trimmed models have been engineered to follow the radius of today's lower profile tires resulting in the most effective coverage without sacrificing design harmony
- * Available in trimmed versions, with additional reinforcement at the fender tip or full, un-trimmed versions for your custom design applications
- * Choose from fender widths of 9" (for 180/200 tires & frames), 11" (for 230/240/250 tires & frames), 12-1/2" (for 280 tire & frame) and 13-1/2" (for 300 tire & frame)
